

Please amend the specification by replacing paragraph 36 with the following:

[36] Thus in one aspect, the invention provides a method for rerouting network traffic, operating in conjunction with a server cluster comprising at least a first and a second server. The method comprises the steps of receiving a packet in a first server, the packet containing indication of a source address; adding a redirection header to the packet, the redirection header including a service address belonging to the second server; and transmitting the packet and redirection header to the service source address.
